

The Basque Country Competitiveness Report 2013 Productive Transformation for Tomorrow

A permanent need for transformation, inherent in any market economy, is even more imperative in times of economic crisis.

In order to make sure that such transformation creates employment and wealth, territories need to develop productive transformation strategies.

The 2013 Basque Country Competitiveness Report conducts an in-depth study of six key levers of competitiveness on which the Basque Country should work in order to move forward in the productive transformation of its economy. It reflects on the main features necessary for the region to overcome its current economic difficulties and to ensure long term sustainable economic development.

The report will be presented on June the 27th at 6:00 pm at the University of Deusto (Bilbao Campus).
